Projects

RFlow – Basic API Gateway System <i>Java, Spring Boot, PostgreSQL</i>	[GitHub]
- Built a basic API Gateway to route and manage requests between multiple backend services. - Implemented rate limiting, request logging, and service health checks for API monitoring and traffic control. - Developed a multi-tenant backend system with request forwarding and mock services using Spring Boot.	
RepoPulse – a GitHub-like System <i>Java, DBMS, PostgreSQL, JDBC</i>	[GitHub]
- Build a GitHub like Console based system with 25+ database tables (mostly BCNF normalized). - Supported 15+ features including commits, branches, pull requests, issues, and file versioning. - Supported role-based access control, fork support, and collaboration features (PR reviews, comments, labels).	
R++ Lang – Custome Programming Lang Interpreter <i>Java, OOPs,</i>	[GitHub]
- Built a custom programming language (R++) with lexer, parser, and AST-based interpreter. - Implemented variables, arithmetic, control flow (if-else, loops), and break/continue support. - Added logical, bitwise and short-hand operators for extended functionality.
